

Creaza offers an engaging suite of web-based applications where learners can use their imagination by creating, publishing and sharing digital stories. You use the toolbox along with various fully developed themes: historical periods, fairy-tales, fantasy worlds, and current challenges, such as climate/environment. Creaza integrates professional and user-generated content, creative tools and a social network in a new and innovative way.

With Creaza

Multimedia tools - Access a range of multimedia tools, all seamlessly integrated with your Frontier Platform.

Project work - Expand the possibilities for creative projects for students.

Collaboration - Share and discuss multimedia projects amongst students.

"What kind of homework do you give our children now? They will not go to bed!"

-Parent on the phone to the municipality.

"He almost never delivered schoolwork before he began using Creaza. Now he delivers his work with joy, and is also a resource person in their class."

- Teacher in a secondary school, Lørenskog, Norway

How does Creaza work

Fully integrated - The Creaza pluspack is fully integrated with your Frontier platform, meaning that students can create and work on projects using the familiar Frontier tools and interface:

- Enter the Resources folder in your Frontier room
- Select 'Create' and choose 'Creaza'
- Complete your project within the Creaza interface and press 'Save'

Saved work - Links to all work will be automatically saved inside Frontier for easy access.

Evaluation - Creaza projects can be handed in as part of an assignment, evaluated and form part of a student's personal portfolio.

With Cartoonist, you can compose multimedia stories. You can use the tool to create comic strips or more personal digital narratives. In Cartoonist, you will encounter themes with backgrounds, characters/figures, and various objects that you can paste into the frames.

With this tool, you can also create title cards, speech balloons, thought balloons, or scream balloons. You can also combine all this with your own images. Your cartoon will be organised into a strip with several frames, which can both be presented on the web and printed out on paper.

- Classic cartoons
- Past
- Present
- Future

MovieEditor is designed to help you produce your own multimedia presentations, based on fully developed thematic universes, with video and sound clips. You can edit a short film or splice together your own version of a newscast, a commercial, a film trailer, or a TV interlude, play it back later, and compare it with the original.

The movie editor also allows you to experiment with how different music or sound effects change your understanding of moving pictures. You can use the movie editor to import your own film clips, sound clips, and images, and splice them into your story. This tool follows established conventions for film editing, synchronizing video, images, sound, and text on a timeline.

Premium functionality

- Export to Mpeg4
- Use your own media files
- Record sound
- Complete effect library
- Make your own text posters
- Graphic elements
- Import cartoons
- Transitions
- Draw sound envelope
- Save as
- Collapse/expand layers
- Waveforms
- Multiple video/graphics layers
- Multiple audio layers
- Import all known video formats

Themes

- Global Village
- World Cities
- Exotic Animals
- Creative Storytelling
- Urban Lifestyle

AudioEditor is designed to help you produce your own audio clips. You can splice together your own version of a newscast, a radio commercial, or a radio interlude, play it back later, and compare it with the original.

AudioEditor is also well suited for making radio news reports and radio plays, and you can publish the finished sound clip as a podcast.

This tool follows established conventions for sound editing, allowing you to place sound files along a timeline, across several channels.

You can also record sound and add it as a track on top of your final edit.

Premium functionality

- Use your own sound files
- Export to m4a
- Draw sound envelope
- Record sound
- Save as
- Collapse/expand layers
- Waveforms

With Mindomo, you can visually organise, and get an overview of, thoughts, ideas, links, and other information.

In order for the brain to remember what you learn, knowledge needs to be categorized. To make the learning process easier and more fun, you can use the mind map tool to make a map of your thoughts and sort them thematically.

The mind map is well suited to exploring new material, looking at connections between new and known knowledge, and organizing material for further development.

Mind map topics can contain media files and links, as well as text.
