

## E-mail hosting

With E-mail hosting through Fronter, you are guaranteed a secure and effective e-mail service fully integrated into your Fronter Platform. A subscription to E-mail hosting allows your organisation to create and maintain e-mail accounts with minimum administrative set-up.

### With E-mail hosting

**E-mail accounts** - Easily create individual or mass IMAP/POP3 e-mail accounts for an unlimited number of students/employees.

**Domain** - Use your own domain for e-mail addresses.

**Integrate** - Set up your preferred e-mail program to check your Fronter e-mail account.

**Webmail client** - Use Fronter as your webmail client for all other POP3 and IMAP accounts.

**Shared e-mail account** - Share a joint e-mail account with several others in the organisation e.g. `post@yourorganisation.com`.

### How does E-mail hosting work

**Webmail** - Read and write e-mails in Fronter anytime, anywhere.

**Account size** - The Fronter administrator can select the account size most suitable for the user group e.g. smallest sized accounts for students, medium sized accounts for employees.

**Folders** - Use your personal or shared Fronter Resources to store e-mail, or create e-mail folders within your Fronter e-mail account.

**Today portal** - Set up the Fronter Today portal to display new incoming messages.

#### Mailbox Configuration
